

Strategy for drive replacement

Option 1: replace defective older drives with similar drives.

- This requires the use of out of production CDRW or DVD-CD writers.
- Disc Robotics has a limited stock of previously used writers that are available at reasonable prices.
- These drives will be tested for mechanical and read / write operations just before shipment.
- DR will provide a 30 day product replacement warranty on used drives.
- List of stock examples:
 - Plexwriter 40x12x40a
 - Plexwriter 48x24x48a
 - Plexwriter Premium
 - Pioneer 106d
 - Pioneer 107d
 - Pioneer 108d
- Please request a current quote and quantity

Option 2,: Upgrade to the newest writers available on the open market.

Considerations:

- Loaders with Standalone controllers are limited to the use of certain drives.
- Loaders with PC inside or Attached to PCs should be able to use any drive the Windows PC will recognize. However, this may require the change of interface in PC driven loaders. Over time a number of different drive interfaces were used such as Firewire A or B, USB 2.0, SATA . Some older PCs will not have the capability to adapt to newer interface technology.
